

Darwish Engineering Emirates

For more than half a century, Darwish Engineering Emirates contributed and still contribute to the overall construction boom taking place in the United Arab Emirates, and was one of the early leaders in the field of general contracting, where it created and implemented many vital projects at the state level, which contributed to its classification as one of the major construction companies to most ministries, agencies and institutions in the UAE.

The company began its work in the UAE in the year 1952 in Dubai and carried out many of the government projects at the time, including, for example, the municipality building, the old palace of the late HH Sheikh Ahmed Al-Thani in 1955 and other diverse projects. It then led the establishment and implementation of Mushrif Palace in Abu Dhabi in 1967, as well many major projects during the early days. The company opened more branches in each of the emirates of Sharjah, Ajman and Fujairah and since then it has been implementing and establishing public and private roads, bridges, government buildings, towers, palaces, shopping centers, airports, and many infrastructure networks.
